

ZBasic Compiler Generic Target License

The Generic Target License entitles a designated individual (the licensee) to compile one or more applications for one or more supported generic target devices on one or more supported computer systems. The license may be irrevocably transferred to another individual by making such request in writing to Elba Corp. Upon issuance of a new license to the transferee, the original license becomes null and void. The original licensee agrees, by virtue of making a transfer request, to destroy the original license and all copies thereof and to ensure that the original license is never again used. The licensee agrees not to distribute the license or in any manner make it available for use by other persons or allow it to be used by other persons and further agrees that such action renders the license null and void.

A bona fide licensee may distribute applications generated by the ZBasic compiler either in binary form (a .zxb or .hex file) or installed on a supported target device with no royalty required to Elba Corp. No right is granted hereby to distribute the ZBasic compiler, ZBasic object libraries, ZBasic IDE or any other intellectual property of Elba Corp.
